# Reminder: read\_csv()

- Useful keyword options
  - names: assigning column labels
  - index\_col: assigning index
  - parse\_dates: parsing datetimes
  - na\_values: parsing NaNs

PANDAS FOUNDATIONS

**Let's practice!**

PANDAS FOUNDATIONS

# **Statistical exploratory data analysis**

# Reminder: time series

- Index selection by date time
- Partial datetime selection
- Slicing ranges of datetimes

```
In [1]: climate2010['2010-05-31 22:00:00'] # datetime
```

```
In [2]: climate2010['2010-06-01'] # Entire day
```

```
In [3]: climate2010['2010-04'] # Entire month
```

```
In [4]: climate2010['2010-09':'2010-10'] # 2 months
```

# Reminder: statistics methods

- Methods for computing statistics:
  - `describe()`: summary
  - `mean()`: average
  - `count()`: counting entries
  - `median()`: median
  - `std()`: standard deviation

PANDAS FOUNDATIONS

**Let's practice!**

PANDAS FOUNDATIONS

# **Visual exploratory data analysis**

# Line plots in pandas

# Line plots in pandas

```
In [1]: import matplotlib.pyplot as plt  
  
In [2]: climate2010.Temperature['2010-07'].plot()  
  
In [3]: plt.title('Temperature (July 2010)')  
  
In [4]: plt.show()
```

# Histograms in pandas

# Histograms in pandas

```
In [5]: climate2010['DewPoint'].plot(kind= 'hist', bins=30)
```

```
In [6]: plt.title('Dew Point distribution (2010)')
```

```
In [7]: plt.show()
```

# Box plots in pandas

# Box plots in pandas

```
In [8]: climate2010['DewPoint'].plot(kind='box')
```

```
In [9]: plt.title('Dew Point distribution (2010)')
```

```
In [10]: plt.show()
```

# Subplots in pandas

# Subplots in pandas

```
In [11]: climate2010.plot(kind='hist', normed=True, subplots=True)
```

```
In [12]: plt.show()
```

PANDAS FOUNDATIONS

**Let's practice!**

PANDAS FOUNDATIONS

# Final thoughts

# You can now...

- Import many types of datasets and deal with import issues
- Export data to facilitate collaborative data science
- Perform statistical and visual EDA natively in pandas

PANDAS FOUNDATIONS

**See you in the  
next course!**
